Background

The present report details the findings of a visit to southeastern Hainan by members of Kadoorie Farm and Botanic Garden (KFBG) in Hong Kong and their colleagues, as part of KFBG's South China Biodiversity Conservation Programme. The overall aim of the programme is to minimise the loss of forest biodiversity in the region, and the emphasis in the first phase is on gathering upto-date information on the distribution and status of fauna and flora.

Report of Rapid Biodiversity Assessments at Jianling and Shangxi Nature Reserves, Southeast Hainan, China, May 1999

Objectives

• The aims of the surveys were to collect up-to-date information on the fauna and flora of Jianling and Shangxi Nature Reserves, and to use this to help determine conservation priorities within South China. Emphasis was on groups that have not been extensively studied, including birds, amphibians, reptiles, fish, ants, dragonflies and butterflies. Only limited parts of the reserves could be surveyed in the time available; less than one day was spent at Jianling and less than two days at Shangxi. The two survey reports are combined here due to their close proximity.

Methods

- On 17 May 1999 a team from Hong Kong (GS, JRF, ML, GTR, LKS, KW), Haikou (FJP, YZD, XY), Guangzhou (XFW, WRJ, XZ), Xinyang (LHJ) and Liuzhou (CM) assembled in Haikou. On 18 May, they set off for Southeast Hainan, driven by Huang Guoxiong (South China Institute of Botany) and Mr. Li (Hainan).
- On 18 May afternoon, they surveyed Jianling Nature Reserve and on 20 May, they surveyed Shangxi Nature Reserve.
- During fieldwork visual searching for plants, mammals, birds, reptiles, amphibians, fish, ants, butterflies and dragonflies was conducted. Frogs and birds were also identified by their calls. Plant records were made by field observation, with some specimens collected.
- Status of large and medium-sized mammals (excluding Insectivora, Chiroptera and Muridae) at Shangxi was inferred largely based on interviews with local people, with reference to colour pictures. For purposes of these interviews a list of South China mammals was compiled from various sources including Guangdong Forestry Department and South China Institute of Endangered Animals (1987), Corbet & Hill (1992) and Zhang Y. *et al.* (1997).
- Vascular plant records were made by XFW or WRJ, and edited by NSC. Mammal records were made by LKS, GTR, ML or JRF. Records of birds were made or verified by LKS, KW, ML or JRF, reptiles and amphibians by ML, fish by LHJ, ants by JRF, dragonflies by KW and GTR, butterflies by GTR and molluscs by CDN or XY.
- Nomenclature in the report is standardised based, unless otherwise stated, on the following references:
 - Flora (Pteridophyta, Gymnospermae and Angiospermae excluding Orchidaceae): Anon. (1959-2001); Anon. (1996-2001); Anon. (2002a, 2002b); The Plant Names Project (2002);
 - Orchids (Angiospermae: Orchidaceae): De Vogel & Turner (1992); Chen (1999); Lang (1999); Tsi (1999);
 - Mammals (Mammalia): D.E. Wilson & Cole (2000);
 - Birds (Aves): Inskipp et al. (1996);
 - Reptiles and Amphibians (Reptilia and Amphibia): Zhao E.-M. & Adler (1993); Zhao E. et al. (2000);
 - Fish (Actinopterygii): Nelson (1994); Wu et al. (1999);
 - Ants (Insecta: Hymenoptera: Formicidae): named species according to Bolton (1995); unnamed species with reference numbers according to the collection currently held by KFBG.
 - Dragonflies (Insecta: Odonata): Schorr et al. (2001a, 2001b);
 - Butterflies (Insecta: Lepidoptera): Bascombe (1995).
- Information on the global status of species is from IUCN publications, notably IUCN Species Survival Commission (2001). Certain taxa, including orchids, reptiles, amphibians, fish and

- invertebrates, have yet to be properly assessed for global status. National conservation status of orchids is based on Wang *et al.* (in press).
- Protected status in China is based on Hua & Yan (1993) for animals, and State Forestry Administration & Ministry of Agriculture (1999) for plants.

Location and management

- Jianling Nature Reserve is in Wanning County, Southeast Hainan, at 18 ° 50'-18 ° 59'N and 110 ° 15'-110 ° 16'E (MacKinnon *et al.*, 1996). It has an area of 109 km², and was established in 1981 to protect tropical monsoon rainforest ecosystems. It apparently adjoins a smaller reserve (7 km²) of the same name, in Baoting County, established in 1983 to protect *Vatica mangachampoi* forest and Rhesus Monkey *Macaca mulatta*. The coordinates of Baoting Jianling are given as 18°41'N by 109°32'E (MacKinnon *et al.*, 1996).
- Jianling has an altitude range from 75 to 804 m (Mackinnon *et al.*, 1996). The present survey covered only the lower elevations, up to about 110 m.
- Shangxi Nature Reserve is also in Wanning, at 18°45′– 18°49′N by 110°08′ 110°13′E. The size is 117 km². The reserve was established in 1981 to protect the tropical rainforest ecosystems (Mackinnon *et al.*, 1996). It is known locally as Niujiaoling, or "Cow Horn Range".
- Shangxi has an altitude range from 180 to 754 m (Mackinnon *et al.*, 1996). The present survey covered only lower elevations, up to 450 m.
- The region has a tropical monsoonal climate. Climatic data for the nature reserves were not available, but mean monthly temperature at Wanning City ranges from 17.8°C in January to 28°C in July; average annual precipitation is about 2,240 mm (Hainan Bureau of Surveying and Mapping, 1996).
- Both Jianling and Shangxi are classified as Forest Ecosystem nature reserves (Zhang W., 1998), and managed by the provincial Forestry Department.

Results

Vegetation

- The zonal vegetation of the region should be tropical seasonal evergreen rainforest. Original forest cover, however, had been destroyed in both areas.
- At Jianling, the vegetation outside the reserve was rubber tree (*Hevea brasiliensis*) plantation. Inside the reserve was secondary shrubland, dominated by *Melastoma candidum*, *M. sanguineum*, *Cratoxylum cochinchinense* and *Aporosa dioica*. Small patches of young secondary or remnant forest less than 10 m in height could be found in streamsides and ravines. Vegetation further inside and at higher elevations could not be assessed.
- The area surveyed at Shangxi included plantation of coffee trees (*Coffea* spp.) outside the reserve and secondary forest and shrubland, said to have been cleared 20 years earlier, inside. Below 300 m the forest canopy was generally 5-6 m in height and up to 30 cm dbh, with occasional larger trees (e.g. a *Bischofia javanica* 1.5 m dbh). This lower forest was dominated by sun-loving plants such as *Cratoxylum cochinchinense*, *Sterculia lanceolata*, *Mallotus anomalus*, *Ficus* spp. and *Arenga pinnata*, with *Calamus rhabdocladus* and *Alpinia* spp. dominant in the liana and herb layers respectively. Further inside, above 300 m, more mature and epiphyte-rich forest, with a closed canopy up to 15 m high could be found, but the flora was not recorded as the botanists did not reach this far.

- 2 -

Flora

- The present survey recorded 105 species in 54 families (Table 1), at Jianling. No orchids were found. Despite the degraded nature of the vegetation, several plant species of conservation importance were found in streamside secondary forest patches:
 - Vatica mangachapoi is Globally Endangered and under Class II National Protection in China.
 - Heritiera parvifolia, Hydnocarpus hainanensis and Litchi chinensis var. euspontanea are Globally Vulnerable; H. parvifolia is also under Class II Protection nationally.
 - Several species found (*Cryptocarya metcalfiana*, *Medinilla arboricola*, *Hedyotis cryptantha* and *Nephelium topengii*) are endemic to Hainan.
 - The tree *Chieniodendron hainanense* is endemic to Hainan and southern Guangxi, and is rare and restricted to natural forest. Only a single remnant individual was found in this survey.
- One hundred and thirteen vascular plant species in 56 families were recorded at Shangxi. They included 13 orchid species. Orchids are listed in Table 2; all other vascular plants are shown in Table 1. Some species of conservation interest were found in the secondary forest:
 - Hopea hainanensis is Globally Critically Endangered and is under Class I National Protection in China. It is endemic to Hainan and northern Vietnam. Only a single individual of this species was found in this survey.
 - Vatica mangachapoi is Globally Endangered and under Class II National Protection in China.
 A single plant was found, in young secondary forest.
 - The orchid *Anoectochilus roxburghii* is listed as Endangered nationally.
 - Aquilaria sinensis and Gmelina hainanensis are both Globally Vulnerable and under Class II
 National Protection in China. Only a single individual of A. sinensis was found in this survey,
 although this species has a long history of planting as a tree crop in South China.
 - Several species, including *Peristrophe strigosa*, *Artabotrys hainanensis*, *Macaranga bracteata*, *Trigonostemon heterophyllus*, *Cryptocarya metcalfiana*, *Medinilla arboricola* and *Hedyotis cryptantha*, are endemic to Hainan.
 - Amomum longipetiolatum is endemic to Hainan and Guangxi.
 - Goniothalamus howii is endemic to Hainan and South Yunnan. It is rare in Hainan and only a single individual was found in this survey.
 - All orchids are regulated by CITES.

Table 1. Vascular plants (excluding Orchidaceae) of Jianling and Shangxi Nature Reserves recorded in the present surveys. Species which are Nationally Protected (Class I or II) (State Forestry Administration & Ministry of Agriculture, 1999), Globally Threatened or Lower Risk (Near-threatened) (IUCN Species Survival Commission, 2001) or narrowly restricted are indicated.

Liparis (cf. bootanensis Griff.) sp.	on mossy rock in forest, 280–310m	epiphytic
Neuwiedia singapureana (Baker) Rolfe	on forest floor with rich humus, 400m	terrestrial, primitive orchid
Zeuxine sp.	on rock with rich humus in forest, 350m	terrestrial

-6-

Mammals

- No direct records of mammals were made at either Jianling or Shangxi.
- A number of species were reported to occur at Shangxi by reserve warden Mr. Chen. No interview on mammal status was possible at Jianling. Status of mammals in the two reserves is inferred (Table 3) based on the observations of Mr. Chen and on past distribution records (Liu & Liu, 1976; Hsu & Wu, 1981; Xu et al., 1983; Zhang Y. et al. (1997).

Table 3. The inferred status of mammals at Jianling and Shangxi Nature Reserves, Hainan, based on past records (summarized in Zhang *et al.*, 1997) and on an interview with a warden of Shangxi. "B" = Baoting County, "W" = Wanning County, "+" = rare, "++" = quite common, "+++" = abundant. Sequence follows D.E. Wilson & Cole (2000).

Scientific name	English name	Past records	Mr. Chen	Probable
				status
Hylomys hainanensis	Hainan Gymnure	-	+	insecure
Crocidura pullata (recorded as C.	Dusky Shrew	В	(not asked)	unknown
russula)				
Tupaia belangeri	Northern Tree Shrew	-	+++	present
Scotomanes ornatus	Harlequin Bat	В	(not asked)	unknown
Nomascus (cf. nasutus) sp.	Eastern Crested Gibbon	B,W ("probably	-	extirpated
(recorded as Hylobates concolor)		extirpated")		
Prionailurus bengalensis	Leopard Cat	-	+++	present
Herpestes javanicus	Javan Mongoose	W	-	insecure or
				extirpated
Martes flavigula	Yellow-throated Marten	W	+	insecure
Melogale moschata	Chinese Ferret-badger	W	-	insecure or
				extirpated
Mustela kathiah	Yellow-bellied Weasel	В	-	insecure or
				extirpated
Selenarctos thibetanus	Asiatic Black Bear	B,W	-	extirpated
Paguma larvata	Masked Palm Civet	-	+++	present
Paradoxurus hermaphroditus	Asian Palm Civet	W	+++	present
Viverra zibetha	Large Indian Civet	B,W	-	extirpated
Viverricula indica	Small Indian Civet	B,W	-	insecure or
				extirpated
Sus scrofa	Wild Boar	-	+++	present
Cervus unicolor	Sambar	W	-	extirpated
Cervus eldi	Eld's Deer	W	-	extirpated
Muntiacus muntjak	Indian Muntjac	B,W	-	extirpated
Manis pentadactyla	Chinese Pangolin	W	+++	present
Callosciurus erythraeus	Pallas's Squirrel	W	-	extirpated
Ratufa bicolor	Black Giant Squirrel	B,W	-	extirpated
Tamiops maritimus (recorded as	Maritime Striped Squirrel	В	+++	present
T. swinhoei)				
Rattus tanezumi (recorded as R.	Tanezumi Rat	B,W	(not asked)	unknown
flavipectus)				
	Turkestan Rat	W	(not asked)	unknown
R. rattoides)				
Rattus norvegicus	Brown Rat	В	(not asked)	unknown
Niviventer fulvescens (recorded	Chestnut White-bellied Rat	В	(not asked)	unknown
as Rattus fulvescens)				
Atherurus macrourus	Asiatic Brush-tailed Porcupine	W	-	unknown
Hystrix brachyura (recorded as H.	Malayan Porcupine	В	+++	present
hodgsoni)				

- Some species suspected to occur are of conservation concern:
 - Hainan Gymnure Hylomys hainanensis is listed as Globally Endangered by IUCN.
 - Chinese Pangolin *Manis pentadactyla* is Globally Near-threatened, and Class II Protected in China.
 - Yellow-throated Marten *Martes flavigula* is also Class II Protected nationally.

Birds

- A total of 22 species of birds were recorded in Jianling Nature Reserve during this survey (Table 4). The most frequently encountered species were Barn Swallow *Hirundo rustica*, Lightvented Bulbul *Pycnonotus sinensis*, Oriental Magpie Robin *Copsychus saularis* and Japanese White-eye *Zosterops japonica*.
- Thirty species were recorded in Shangxi Nature Reserve (Table 4). The most frequently encountered were Spotted Dove *Streptopelia chinensis*, Oriental Magpie Robin, Black-throated Laughingthrush *Garrulax chinensis* and Grey-cheeked Fulvetta *Alcippe morrisonia*.
- A call thought to be of a Hainan Partridge *Arborophila ardens* was heard at Shangxi, but the species was not firmly identified.
- A Eurasian Hoopoe *Upupa epops* was seen from the vehicle, halfway between Shangxi and Wanning county town.

Table 4. Birds recorded in Jianling and Shangxi Nature Reserves, 18 and 20-21 May 1999. Sequence follows Clements (2000).

Scientific name	English name
Milvus migrans	Black Kite
Spilornis cheela	Crested Serpent Eagle
Francolinus pintadeanus	Chinese Francolin
Gallus gallus	Red Junglefowl
Streptopelia chinensis	Spotted Dove
Chalcophaps indica	Emerald Dove
Hierococcyx sparverioides	Large Hawk Cuckoo
Hierococcyx fugax	Hodgson's Hawk Cuckoo
Cuculus micropterus	Indian Cuckoo
Centropus sinensis	Greater Coucal
Centropus bengalensis	Lesser Coucal
Cypsiurus balasiensis	Asian Palm Swift
Alcedo atthis	Common Kingfisher
Halcyon smyrnensis	White-throated Kingfisher
Megalaima oorti	Black-browed Barbet
Hirundo rustica	Barn Swallow
Pycnonotus sinensis	Light-vented Bulbul
Pycnonotus aurigaster	Sooty-headed Bulbul
Alophoixus pallidus	Puff-throated Bulbul
Cyornis hainanus	Hainan Blue Flycatcher
Copsychus saularis	Oriental Magpie Robin
Enicurus schistaceus	Slaty-backed Forktail
Enicurus leschenaulti	White-crowned Forktail
Rhipidura albicollis	White-throated Fantail
Garrulax maesi	Grey Laughingthrush
Garrulax chinensis	Black-throated Laughingthrush
Garrulax canorus	Hwamei
Pomatorhinus ruficollis	Streak-breasted Scimitar Babbler
Napothera epilepidota	Eyebrowed Wren Babbler
Stachyris ruficeps	Rufous-capped Babbler
Alcippe morrisonia	Grey-cheeked Fulvetta
Yuhina zantholeuca	White-bellied Yuhina
Nectarinia jugularis	Olive-backed Sunbird
Aethopyga christinae	Fork-tailed Sunbird
Dicaeum cruentatum	Scarlet-backed Flowerpecker
Zosterops japonica	Japanese White-eye
Lanius schach	Long-tailed Shrike
Cissa hypoleuca	Indochinese Green Magpie
Lonchura striata	White-rumped Munia

• Some species are of particular conservation concern:

- 8 -

- Hainan Partridge is Vulnerable globally, and Class II Protected nationally.
- Crested Serpent Eagle *Spilornis cheela*, Black Kite *Milvus migrans*, Red Junglefowl *Gallus gallus*, Greater Coucal *Centropus sinensis* and Lesser Coucal *Centropus bengalensis* are Class II Protected species in China.

Reptiles and Amphibians

- Five species of amphibian and three species of lizard were recorded from Jianling (Table 5). The most frequently encountered was *Rana limnocharis*.
- Fourteen species of amphibian, four lizards and two snakes were recorded from Shangxi (Table 5). Most frequent was a *Philautus* tree frog that resembled *P. ocellatus* but is probably a new species. It has also been recorded from Diaoluoshan, Wuzhishan, Jiaxi, Limushan and Lumuwan during KFBG surveys.

 Table 5.
 Amphibians and reptiles recorded in and around Jianling and Shangxi Nature Reserves, May

1999. Sequence follows Zhao E.-M. & Adler (1993).

1999. Sequence follows Znao		
Species	Habitat

Tropidophorus hainanus	forest stream	✓
Tropidoprioras Hainarias	forest	✓
Enhydris plumbea	marsh in forest	✓
Sinonatrix percarinata	forest stream	✓
Ontoriating percannata	10100t Stilutii	-

- Several species are of conservation concern:
 - Leptobrachium hainanensis, Pelophryne scalpta, Amolops torrentis, Rana fragilis, Rana hainanensis and the new Philautus sp. are endemic to Hainan. All were at Shangxi; A. torrentis also occurred in the stream at Jianling.
- The occurrence at Shangxi of many forest species, including *Leptobrachium hainanensis*, *Pelophryne scalpta*, *Acanthosaura lepidogaster* and *Tropidophorus hainanus*, indicated that the forest had high ecological integrity.

Fish

- Ten species of freshwater fish were reported (Table 6); five species from each of the two reserves. The specimens have not been examined by specialists.
- Below Jianling, the most frequently encountered species reported were *Gambusia affinis* and *Micronemacheilus pulcher*. Near Shangxi, the most frequently encountered species were *Opsariichthys bidens* and *Capoeta semifasciolata*.

Table 6. Freshwater fish reported near Jianling and Shangxi, with rank of abundance: "+" = rare, "++" = average, "+++" = common. "*" = Nomenclature follows Pan (1991). Sequence follows Nelson (1994).

Species	Habitat	Below Jianling	Below Shangxi
Parazacco spilurus fasciatus	small stream	+	
Opsariichthys bidens	stream		++
Capoeta semifasciolata	stream		++
Sinilabeo discognathoides discognathoides	small river	+	
Osteochilus vittatus	stream		+
Pseudorasbora parva	stream		+
Micronemacheilus pulcher	large stream	+++	
Mystus guttatus	stream		+
Gambusia affinis *	small waterway	++	
Rhinogobius leavelli	large stream	+	

• Sinilabeo discognathoides discognathoides is endemic to Hainan.

Ants

- Fifteen ant species were recorded from Jianling (Table 7). The most frequently encountered were *Crematogaster* sp. 8, *Diacamma* sp. 1 and *Pheidole plagiaria*.
- Thirty-one ant species were recorded from Shangxi (Table 7). The most frequent were Diacamma sp. 1, Anoplolepis gracilipes, Leptogenys kitteli, Pachycondyla sp. 1 and Pheidole plagiaria.

Table 7. Ant species recorded in and around Jianling and Shangxi Nature Reserves, May 1999. * Species with a strong forest association.

Species	Habitat
Acropyga acutiventris *	closed 15m broadleaf, 330m
Aenictus (laeviceps group) sp. 2	eroded grassland, 90m
Anochetus risii	closed 5m broadleaf, 340m
Anoplolepis gracilipes	open low vegetation, 50-450m
Camponotus (cf. mitis) sp. 11	forest, 450m
Camponotus nicobarensis	low forest, shrubland, 100-360m
Camponotus rufoglaucus	open vegetation, 40-450m
Camponotus (variegatus group) sp. 4	resort
Crematogaster (cf. laboriosa) sp. 3	closed tall shrubland, 450m
Crematogaster (cf. dohrni) sp. 8	open forest & shrubland, 50-100m
Diacamma (nr. rugosum) sp. 1	forest, shrubland, 40-450m
Gnamptogenys bicolor	forest, meadow, 400-450m
Gnamptogenys binghami *	forest, shrubland, 440-450m
Hypoponera sp. 6 **	closed broadleaf forest, 450m
Leptogenys kitteli *	closed broadleaf forest, 360-450m

- 10 -

Species Habitat closed broadleaf & shrubland, 270-450m Leptogenys peuqueti Monomorium (cf. bimaculatum) sp. 9 * closed tall shrubland, 280m Monomorium (cf. impexum) sp. 2 * open vegetation, 50-200m Monomorium sp. 12 agricultural/ village, 60m Odontomachus monticola * closed low broadleaf, 200m Odontoponera (cf. denticulata) sp. 1 forest & open plantation, 50-450m closed 15m broadleaf, 300m Oecophylla smaragdina Oligomyrmex (cf. wheeleri) sp. 1 * open bamboo/shrubland, 50m Pachycondyla leeuwenhoeki * closed tall shrubland, 450m Pachycondyla (javana group) sp. 1 * closed broadleaf, 200-450m Pachycondyla (cf. luteipes) sp. 2 * closed forest, shrubland, 280-440m Pachycondyla (cf. nigrita) sp. 17 * low open broadleaf, 110m Pachycondyla (cf. sauteri) sp. 7 closed broadleaf forest, 450m Paratrechina longipes resort Paratrechina sauteri open bamboo/shrubland, 50m Pheidole plagiaria forest, meadow, 50-450m Pheidole sp. 28 open shrubland, 100m Polyrhachis sp. 20 closed forest, 290-360m Prenolepis (cf. emmae) sp. 1 * closed 15m broadleaf, 330m Prenolepis magnocula * closed broadleaf forest, 450m forest, shrubland, 50-420m Pristomyrmex pungens Probolomyrmex sp. 1 * closed bamboo & broadleaf, 360m Recurvidris sp. 1 ' open bamboo/shrubland, 50m Tetraponera rufonigra agricultural/village, 50m Vollenhovia sp. 5 closed tall shrubland, 420m

- *Probolomyrmex* sp. 1 has been found only from Shangxi and from Kadoorie Farm and Botanic Garden in Hong Kong.
- The percentage of forest-dependent species was only about 27% at Jianling, indicating the low integrity of the habitats surveyed. The percentage at Shangxi was 39%, a typical figure for secondary forest.
- Anoplolepis gracilipes, an invasive species from Africa, was widespread in both reserves. It was observed undertaking a nuptial flight at Shangxi on 20 May at the forest campsite, indicating that sexual reproduction and dispersal by air are taking place.

Dragonflies

- Fourteen species were recorded at Jianling, and twelve at Shangxi (Table 8). There was no species overlap between the sites.
- The most abundant species at Jianling was *Megalogomphus sommeri*. Most abundant at Shangxi were *Pseudolestes mirabilis*, *Coeliccia scutellum hainanense*, *Drepanosticta zhoui* and *Drepanosticta elongata*.
- Shangxi yielded four previously undescribed damselfly species (*Vestalis miao*, *D. zhoui*, *D. elongata* and *Sinosticta hainanense*). *Sinosticta* was previously a monotypic genus (K.D.P. Wilson, 1997).
- Tetracanthagyna waterhousei, Stylurus amicus, Heliogomphus scorpio, Fukienogomphus prometheus, Megalogomphus sommeri and Lyriothemis tricolor Onychothemis testaceum tonkinensis are new records for Hainan.

Table 8. Dragonfly species recorded from Jianling and Shangxi, 18-21 May 1999. Sequence of families follows Schorr *et al.* (2001a, 2001b).

Species	Notes
Neurobasis c. chinensis	
Vestalis miao	New species (Wilson & Reels, 2001)
Rhinocypha b. biforata	
Rhinocypha f. fenestrella	

Notes Species Euphaea ornata Pseudolestes mirabilis Hainan endemic Pseudagrion pruinosum fraseri Coeliccia scutellum hainanense Hainan endemic subspecies Coeliccia cvanomelas Copera marginipes New species (Wilson & Reels, 2001) Drepanosticta zhoui Drepanosticta elongata New species (Wilson & Reels, 2001) Sinosticta hainanense New species (Wilson & Reels, 2001) Tetracanthagyna waterhousei Asiagomphus hainanensis Stylurus amicus Heliogomphus scorpio Fukienogomphus prometheus Paragomphus pardalinus Nihonogomphus thomassoni Hainan endemic Megalogomphus sommeri Lamelligomphus hainanensis Lyriothemis tricolor Onychothemis testaceum tonkinensis Tholymis tillarga Zygonyx iris insignis

- Some species recorded are of conservation significance:
 - Vestalis miao is a new species known only from Diaoluoshan National Forest Park and Shangxi. It was described by K.D.P. Wilson & Reels (2001), and named after the resident Miao people.
 - *Drepanosticta elongata* is a new species known only from Shangxi (the type locality, referred to as Niujialin) and Diaoluoshan. It was described by K.D.P. Wilson & Reels (2001).
 - Sinosticta hainanense is a new species known only from Shangxi (the type locality, referred to as Niujialin), Diaoluoshan and Bawangling.
 - Nihonogomphus thomassoni is known only from Hainan, and has been recorded only from Jianling and Diaoluoshan during KFBG surveys.
 - Pseudolestes mirabilis and Coeliccia scutellum hainanense and Drepanosticta zhoui are known only from Hainan forest areas.
 - Lamelligomphus hainanensis and Zygonyx iris insignis are known only from Hainan and Hong Kong.
 - Megalogomphus sommeri is known only from Fujian, Hainan, Hong Kong and Jiangxi.

Butterflies

- A total of 45 butterfly species were recorded 26 species at Jianling, and 33 at Shangxi (Table 9). The relatively low species numbers may be partly explained by the late start (15.00) at Jianling and the poor weather at Shangxi on 20 May.
- The most abundant species at Jianling was *Precis atlites*. No species was especially abundant at Shangxi.
- Four species (*Troides* sp., *Eurema* sp., *Parantica* sp. and *Vindula* sp.) could not be firmly identified.

Table 9. Butterflies recorded at Jianling (18 May 1999) and Shangxi (20-21 May 1999). Sequence of families follows Bascombe (1995).

Species	Habitat
Matapa aria	farmland/forest
Graphium agamemnon	scrubby track/stream

<i>Vindula</i> sp.	farmland/forest

• Ragadia crisilda and Thaumantis diores (both at Shangxi) appear to be dependent on good natural forest.

Molluscs

- Four species of freshwater molluscs were recorded at Jianling (Table 10). The most frequently encountered species were *Semisulcospira jacquetiana* and *S. paludiformis*.
- One slug and three freshwater molluscs were recorded at Shangxi. Most frequent were *S. paludiformis* and *Melania tuberculata*.

Table 10. Molluscs recorded at Jianling and Shangxi, May 1999.

Species	Habitat
Anodonta woodiana woodiana	stream
Brotia swinkoei	stream
Melania tuberculata	stream
Semisulcospira hainanensis	stream
Semisulcospira jacquetiana	stream
Semisulcospira paludiformis	stream
Vaginulus alte	shrubland

• No terrestrial molluscs were detected at Jianling, and none in forest at Shangxi. This may reflect the effect of past deforestation.

Summary of flora and fauna

- The vegetation in the part of Jianling Nature Reserve covered in this survey was mainly shrubland and young secondary forest.
- The present survey was inadequate to give a good representation of ecological integrity of Jianling, but rather few forest specialists were found among the fauna, reflecting the impact of extensive deforestation. Mollusc populations may also have been impacted by the application of pesticide in the rubber plantation and by over-collecting for duck feed in recent years.
- Some species of conservation importance were found at Jianling, including the Globally Endangered tree *Vatica mangachapoi* and three Vulnerable plants (*Heritiera parvifolia*, *Hydnocarpus hainanensis* and *Litchi chinensis* var. *euspontanea*). The forest also contained a number of species with very restricted ranges, including five plants and the endemic dragonfly *Nihonogomphus thomassoni*, known only from Jianling and Diaoluoshan in Southeast Hainan.
- MacKinnon *et al.* (1996) predicted Jianling to be of local significance to biodiversity conservation, considering it to be in fine condition. The inner part of the reserve was not visited during this survey, but the findings suggest the site remains of local significance.
- At Shangxi the vegetation was also secondary, but more mature than that encountered at Jianling. Integrity was higher, judging by the higher proportion of forest-specialist fauna.
- Plants of conservation importance recorded at Shangxi included the Critically Endangered *Hopea hainanensis*, the Endangered *Vatica mangachapoi*, two Vulnerable species (*Aquilaria sinensis* and *Gmelina hainanensis*) and ten other species of narrow global range. Animals endemic to Hainan included five frog species and a number of dragonflies. Of these *Vestalis miao* and *Drepanosticta elongata* have been found only from Southeast Hainan, at Shangxi and Diaoluoshan, while *Sinosticta hainanense* is known only from these two sites and Bawangling.
- The presence of the Endangered Hainan Gymnure could not be confirmed, but the species was reported to occur at Shangxi. A call attributed to the globally Vulnerable Hainan Partridge was also heard, though the identification could not be confirmed.
- MacKinnon *et al.* (1996) considered Shangxi's protected status should be re-evaluated due to the unclear boundaries and condition. This survey confirms that the site is of high local importance in biodiversity conservation.

Threats and problems

- Both Jianling and Shangxi Nature Reserves have suffered past deforestation and habitat disturbance. While both have regenerating vegetation, this process was hampered by continued clearance for plantations of crop plants.
- At the time of the visit there seemed to be insufficient staff to control illegal activities at either Jianling or Shangxi.

Opportunities

- Shangxi Nature Reserve contains some good secondary forest. Although some of the larger animal species have been lost, the forest retains a large element of the forest biota. Both Jianling and Shangxi still support globally Threatened species.
- If it is possible to prevent disturbance, including logging, forest clearance and planting of exotic species, the conservation value of both sites could be greatly increased through natural regeneration.
- Regeneration, in old plantations and open shrubland, could be accelerated by planting trees native to southeast Hainan. Seeds for such reforestation should be collected locally.
- Individual trees of locally rare and important species could be fenced and labeled, especially in the case of plants that are easily accessible. Seeds collected from existing rare trees could also contribute to reforestation, reinforcing their populations in the reserves, but seeds should be collected from as many parent plants as possible to avoid loss of genetic diversity.
- The reported presence of threatened vertebrates, including Hainan Gymnure and Hainan Partridge, merits further investigation.

Acknowledgements

The editors wish to thank the Hainan Provincial Forestry Department for their cooperation and assistance, and all participants of the survey team, including field staff at Shangxi Nature Reserves. We also thank our colleagues at KFBG, Ms Joanne Loi and Mr Wicky Lee, for data input. This work was funded by KFBG.
